

► Table of contents

Chapter 1 ► Introduction 13

- 1 Introduction 13
- 2 Energy requirement and sustainability 14
- 3 Energy requirement from the perspective of consumption patterns 15
- 4 Objective and outline of this thesis 16
- References 19

Chapter 2 ► Determining the primary energy requirement of consumption patterns 20

- Abstract 20
- 1 Introduction 21
- 2 Determining the energy requirement of consumer goods 22
 - 2.1 Input-output analysis and process analysis 22
 - 2.2 Hybrid analysis 23
- 3 The hybrid method for energy analysis with the domestic refrigerator as an example 24
 - 3.1 The first step: construction of a flow chart 25
 - 3.2 The second step: the mass balance 28
 - 3.3 The third step: the financial balance 28
 - 3.4 The fourth step: energy requirement for the production of the basic materials (E_m) 29
 - 3.5 The fifth step: energy requirement for residual goods (E_r) 30
 - 3.6 The sixth step: direct energy requirement for manufacturing the product (E_e) 30
 - 3.7 The seventh step: energy requirement for the manufacture of capital goods (E_c) 31
 - 3.8 The eighth step: energy requirement for the transport and trade sector (E_t) 31
 - 3.9 The ninth step: direct energy requirement in the consumption phase (E_h) 32
 - 3.10 The tenth step: energy requirement for waste disposal (E_w) 32
 - 3.11 The final step: adding up the energy requirements 32

4	The suitability of the hybrid method for determining the energy requirement of consumption patterns	35
4.1	Making a quick energy analysis of consumer goods	35
4.2	Accuracy of the hybrid method for determining the energy requirement of consumer goods	36
4.3	Accuracy in the energy requirement of trade	36
5	Conclusions	37
	References	38

Chapter 3 ► The energy requirement of cut flowers and consumer options to reduce it 41

	Abstract	41
1	Introduction	42
2	The role of cut flowers and indoor plants in household decoration	43
3	The energy requirement of cut flowers	44
4	Functionality of cut flowers and consumption characteristics	50
5	Reduction options	51
5.1	Replacement by other products in the same product category	51
5.1.1	Buy more cut flowers in the summertime and fewer in the wintertime	52
5.1.2	Buy less energy-intensive cut flowers	52
5.1.3	Extend the lifetime of cut flowers by proper treatment	54
5.1.4	Buy cut flowers grown using environment-friendly methods	54
5.1.5	Buy cut flowers grown in warm countries instead of Dutch cut flowers	55
5.1.6	Buy bulbs instead of bulbous cut flowers	55
5.2	Replacement by other products with a comparable function	56
5.2.1	Buy indoor plants instead of cut flowers	56
5.2.2	Buy plastic/textile flowers instead of cut flowers	57
5.2.3	Buy paintings and sculptures instead of cut flowers	57
5.2.4	Buy alternative gifts	58
6	Energy reduction options surveyed	58
7	Discussion	61
8	Conclusions	64
	Acknowledgements	65
	References	66
	Appendix 3A	69

Chapter 4 ► The direct and indirect energy requirements of Dutch households 74

Abstract 74

1 Introduction 75

2 Method 76

 2.1 The household expenditure survey 76

 2.2 Determining the cumulative energy requirement of the consumption items 77

3 Results 80

 3.1 Energy requirement, household expenditure and energy intensity 81

 3.2 Energy requirement and net household income 86

 3.3 Energy requirement and number of members of a household or age of the first respondent 88

4 Discussion 91

5 Conclusions 93

Acknowledgements 93

References 94

Appendix 4A ► Energy intensities and energy requirement of an average Dutch household 96

Appendix 4B ► Price - income relationships 111

Chapter 5 ► Household energy requirement and value patterns 113

Abstract 113

1 Introduction 114

2 The consumer survey 115

3 Determination of value patterns 116

4 Determination of the energy requirement 119

 4.1 Determining the actual consumption pattern 119

 4.1.1 Estimation of the standard consumption pattern 120

 4.1.2 Natural gas and electricity 121

 4.1.3 Transport 122

 4.1.4 Holidays abroad 123

 4.1.5 Dwelling 124

 4.1.6 Food 124

 4.1.7 Determining the actual consumption pattern 125

 4.2 Calculating a reference energy requirement 127

5	Energy requirement and value patterns, motivation and problem perception	128
5.1	Energy requirement and value patterns	128
5.2	Energy requirement and problem perception for climate change	132
5.3	Energy requirement and the motivation to save energy	133
5.4	Conclusion	135
6	Low- and high-energy households	135
7	Discussion	138
8	Conclusions	140
	Acknowledgements	141
	References	142

Chapter 6 ► Long-term trends in direct and indirect household energy intensities: a factor in dematerialisation 145

	Abstract	145
1	Introduction	146
2	Method and data	147
3	Expenditure data	149
4	Results	151
4.1	General trends	152
4.2	Development of consumption	153
4.3	Total household energy requirement	154
4.4	Direct energy requirement	156
4.5	Indirect energy requirement	158
4.6	Energy intensity	159
5	Discussion	161
6	Conclusions	164
	Acknowledgements	165
	References	166
	Appendix 6A ► Matching consumption categories and energy intensities	168

Chapter 7 ► Long-term scenarios for the direct and indirect energy requirement of Dutch consumers 173

Abstract 173

1 Introduction 174

2 A method to calculate private consumption patterns 176

2.1 First step: scenario context 178

2.2 Second and third steps: driving forces and their influence on the consumption pattern 179

2.2.1 Consumption pattern for the base year 179

2.2.2 Demographic changes 180

2.2.3 Economic changes 181

2.2.4 Changes in consumer purchasing behaviour 185

2.2.5 (Energy-) efficiency changes of consumer goods 188

2.2.6 Efficiency changes in the production of consumer goods 189

2.3 Fourth step: total energy requirement due to private consumption 189

2.3.1 Efficiency changes in the production of consumer goods 190

3 Consumption pattern and energy requirement for 2030 192

3.1 Consumption patterns for 1995 and 2030 192

3.2 Energy requirement for private consumption, 1995 – 2030 193

3.3 Effects of the separate driving forces on the energy requirement 195

3.4 Dematerialisation in past and future 196

4 Discussion 198

4.1 Method 198

4.2 Consistency 199

4.3 Uncertainties 199

5 Conclusions 202

Acknowledgements 203

References 204

Appendix 7A ► Effects of changes in consumer purchasing behaviour on the consumption pattern 208

Appendix 7B ► Symbols used in chapter 7 214

► **Summary 217**

- 1 Introduction 217
- 2 Determining the primary energy requirement of consumption patterns 218
- 3 The energy requirement of cut flowers and consumer options to reduce it 219
- 4 The direct and indirect energy requirements of Dutch households 220
- 5 Household energy requirement and value patterns 222
- 6 Long-term trends in direct and indirect household energy intensities 223
- 7 Long-term scenarios for the direct and indirect energy requirement of Dutch consumers 224
- 8 Final comments 227

► **Samenvatting 228**

- 1 Inleiding 228
- 2 Het bepalen van het primaire energieverbruik van consumptie patronen 229
- 3 Het energieverbruik voor snijbloemen en mogelijkheden voor consumenten om dit energieverbruik te reduceren 230
- 4 Het directe en indirecte energieverbruik van Nederlandse huishoudens 231
- 5 Huishoudelijk energieverbruik en waardepatronen 233
- 6 Lange termijn trends in de directe en indirecte energie-intensiteit van huishoudelijke consumptie 235
- 7 Lange termijn scenario's voor het directe en indirecte energieverbruik van Nederlandse consumenten 236
- 8 Tot slot 239
